

ELECTRIC VEHICLE SUPPLY EQUIPMENT

Compliant Network Service Providers

Grantees receiving New Jersey Department of Environmental Protection (NJDEP) or New Jersey Board of Public Utilities (NJBP) grant funds for electric vehicle supply equipment subject to data reporting requirements are required to procure appropriate network services from one of the companies on the list of Compliant Network Service Providers below.

While many of the companies listed here can also provide EV chargers, this list only shows that their network service software is compliant. Grantees may select any EV charger hardware that is able to interface with software from one of the companies listed here, and that meets the technical specifications for the relevant grant program.

Network Service Providers offer software that operates smart EV charging stations. This software typically offers an online portal for owners of networked charging stations to manage their equipment. Typically, the portal allows for remote diagnostics, turning equipment on and off, managing access, and reporting data on usage, among other functions. Many Network Service Providers offer systems for setting user fees and collecting payments.

Typically, Network Service Providers charge fees for access to their software and may offer tiered service plans. Certain Network Service Providers may be capable of managing only certain makes and models of charging station hardware. The grantee is responsible for verifying that they are purchasing an appropriate and compatible network service plan for their charging station.

Compliant Network Service Providers have demonstrated that they are willing and able to report certain detailed, anonymized charging session data to the Program.

NJDEP, NJBP, and the Program do not endorse any Network Service Provider. Inclusion on the Compliant Network Service Provider List is not a guarantee of quality of service.

New Compliant Network Service Providers will be added to this list on a rolling basis.
